Attempt : 1

Total Mark : 10

Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Abi is working on a text analysis project where she needs to categorize words based on their length.

Words that have three or fewer characters are considered "Short", while

words with more than three characters are classified as "Long."

Write a Java program that takes a sentence as input, analyzes each word, and prints a list showing whether each word is "Short" or "Long."

Use the predefined functional interface `Function<String, String>` along with a lambda expression for categorization.

Input Format

A single line containing a sentence (words separated by spaces).

Output Format

- A single line with each word categorized as "Short" or "Long", separated by spaces.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: I love my cat

Output: Short Long Short Short

Answer

```
import java.util.Scanner;
import java.util.function.Function;

public class Main {
    public static void main(String[] args) {

        Scanner sc = new Scanner(System.in);

        // take input sentence
        String sentence = sc.nextLine();

        // lambda function to categorize words
        Function<String, String> checkLength = (word) -> {
            if (word.length() <= 3)
                return "Short";
            else
                return "Long";
        };

        // split sentence into words
        String[] words = sentence.split(" ");

        // process each word
        for (String word : words) {
            System.out.print(checkLength.apply(word) + " ");
        }
    }
}
```

}
}

Status : Correct

Marks : 10/10
