2028_REC_OOPS using Java_Week 2_Q8

Attempt : 1

Total Mark : 10

Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

A bank generates secure codes using 3-digit numbers where each digit is unique, and the code must be divisible by 3. You are tasked with generating the first N such codes based on user input, ensuring the digits are unique and the number is divisible by 3.

Note: Use nested for loops to solve.

Input Format

The first line contains an integer N representing the number of valid codes to generate.

Output Format

The output prints N lines, each line contains a valid 3-digit code.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 5

Output: 102

105

108

120

123

Answer

```
// You are using Java
import java.util.Scanner;
class three{
    public static void main(String[] args){
        Scanner sc = new Scanner(System.in);
        int n = sc.nextInt();
        int count=0;
        for (int i=1 ; i<=9 && count<n ; i++){
            for(int j=0 ; j<=9 && count<n ; j++){
                for(int k=0; k<=9 && count<n; k++){
                    if(i!=j && j!=k && i!=k){
                        if((i+j+k)%3==0){
                            int num=i*100+j*10+k;
                            System.out.println(num);
                            count++;
                        }
                    }
                }
            }
        }
    }
}
```

Status : Correct

Marks : 10/10
