2028_REC_OOPS using Java_Week 8_Q3

Attempt : 2

Total Mark : 10

Marks Obtained : 2.5

Section 1 : Coding

1. Problem Statement

In a user registration system, there is a requirement to implement a username validation module. Users attempting to register must adhere to specific criteria for their usernames to be considered valid.

Your task is to develop a program that takes user input for a desired username and validates it according to the following rules:

The username must not contain any spaces. The username must be at least 5 characters long.

Implement a custom exception, `InvalidUsernameException`, to handle cases where the entered username does not meet the specified criteria.

Input Format

The input consists of a string S, representing the desired username.

Output Format

If the username is valid, print "Username is valid: [S]".

If the username is invalid:

1. If the username is short, print "Invalid Username: Username must be at least 5 characters long"
2. If the username contains spaces, print "Invalid Username: Username cannot contain spaces"

Refer to the sample output for formatting specifications.

Sample Test Case

Input: John

Output: Invalid Username: Username must be at least 5 characters long

Answer

```
// You are using Java
import java.util.Scanner;
class InvalidUsernameException extends Exception{
    InvalidUsernameException(String msg){
        super(msg);
    }
}
class demo{
    public static void chkUsernameException(String name) throws
InvalidUsernameException{
        if(name.length()<5){
            throw new InvalidUsernameException("Username must be at least 5
characters long");
        }
        if(name.contains(" ")){
            throw new InvalidUsernameException("Username cannot contain
spaces");
        }
    }
    public static void main(String args[]){
```

```
Scanner sc = new Scanner(System.in);
try{
    String name = sc.nextLine();
    chkUsernameException(name);
    System.out.printf("Username is valid: %s",name);
}
catch(InvalidUsernameException e){
    System.out.println("Invalid Username: "+e);
}
}
```

Status : Partially correct

Marks : 2.5/10
